

# Energy Transition = 3D + E

## Decarbonization

Energy Efficiency & Renewable  
= 2 pillars of the energy transition

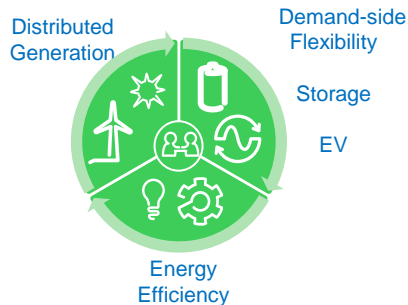

The bulk of CO2 emissions  
comes from EE & RE

## Decentralization

in “Paradigm “ shift

*Prosumer & DER first*

*Connected to a smart and  
flexible distribution grid*

Double flow of energy &  
information  
More real time operation  
New design & planning

## Digitization

Enabled by Digitization

Of an energy system more safe –reliable-  
efficient-sustainable – connected

With more Real time and open  
integration over the full life cycle

Life Is On
